-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blair et al in view of Dienhart et al. Blair discloses the invention substantially as claimed. Blair discloses a method of monitoring the refrigerant level in the air conditioning system of an automotive vehicle in which the superheat at the evaporator is measured and compared to a predetermined limiting value in order to detect low refrigerant charge. In one embodiment the refrigerant temperatures at the inlet and outlet of the evaporator are used to measure the low refrigerant level (see Figure 2 and col. 4, line 54 to col. 5, line 11). Dienhart teaches the use of CO₂ as a refrigerant in automotive vehicle air conditioning systems (see col. 1, lines 35-50). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the system of Blair such that it included the use of CO₂ as the refrigerant in the automotive vehicle air conditioning system in view of the teachings of Dienhart.
